

AMENDMENTS TO THE SPECIFICATION

Please amend the specification by amending the paragraph beginning on page 5, line 6, to read as follows:

Accordingly, the present invention has been made to solve the above-mentioned problems occurring in the prior art, and an object of the present invention is to provide the phase deficiency display device for a thermal magnetic type molded case circuit breaker capable of displaying an a phase deficiency to a user when the phase deficiency occurs on the lines in such a manner that the user can rapidly deal with the phase deficiency and can prevent loss caused by heat generated due to the phase deficiency.
